

SAFETY FIRST.

THEN INCREASED PROTECTION AND REDUCED COSTS.

Maintain your organisation's network security with BCX Managed Firewall

BCX's Managed Firewall is a managed service that provides all-in-one multifunctional network security for client's networks and devices. It includes dedicated on-premises, dedicated hosted and shared hosted security devices managed from a single platform and an appliance that provides a variety of security features. These appliances may either be hosted in the data centre or could be client premises equipment (CPE) based. All devices are fully managed by BCX from a centralised platform.

HOW DOES IT WORK?

Managed Firewall centrally manages devices that provide functionality features such as firewall, intrusion detection (IDS), intrusion prevention (IPS), web-filtering, antivirus, and VPN access. The centralised platform is a new security architecture approach that is all-inclusive in performing multiple security functions within one single appliance, therefore reducing complexity.

FEATURES

- Firewalling
- Intrusion detection and prevention
- Application control
- Content filtering
- Virtual Private Networks (VPNs)
- Web filtering
- Anti-Spam and Anti-Virus

BENEFITS

- Reduced maintenance and infrastructure costs for a lower total cost of ownership (TCO).
- Minimises the business impact through exposure to potential security threats as well as ensuring compliance of information security regulatory requirements.
- Reduced complexity with management via a single platform.
- Simplicity as there is no need to install multiple software.

PRODUCT OPTIONS

Managed Firewall offers different deployment models, namely:

- Dedicated CPE [Either single/standalone or high availability].
- Dedicated Hosted [Either single or high availability].
- Shared Hosted [High availability by default].

The respective service models can be deployed as a single device, active/passive or active/ active configurations depending on the client's requirements for high availability.

SERVICE COMPONENTS

The Managed Firewall management options, in terms of security support capabilities available to clients, include basic, standard and advanced. More details of components and service descriptions are available on the Telsol website.
